PROFESSIONAL SUMMARY

Software engineer with 1.5+ years in enterprise web development and AI systems, proficient in React, Spring Boot, and Node.js. Currently at TCS building a production Tax Management System.

EXPERIENCE

Assistant System Engineer | Tata Consultancy Services (TCS) - Ahmedabad, India Nov 2024 – Present

- Coordinated Agile meetings as Scrum Master during training, leading a 5-member team to deliver a Bill Management System across 4 sprints
- Consolidated 28 redundant API calls into a single unified request, cutting network overhead by 96% and improving page load performance
- Implemented 5+ Angular frontend modules for a Tax Management System — form validation, Role-Based Access Control (RBAC), and REST API integration with Spring Boot — reducing data-entry errors by 30%
- Contributed 3 Spring Boot service endpoints for tax calculation and report generation, cutting manual reporting effort by 2 hours per week

Software Developer Intern | Learniphi Technology Pvt. Ltd. - Ahmedabad, India Jan 2024 – Oct 2024

- Engineered an offline document viewer plugin for Open edX LMS supporting PDF, PPT, Word, and Excel — deployed across 5+ courses serving 200+ learners
- Integrated Razorpay payment gateway and Google OAuth2, streamlining checkout for 200+ users and reducing failed authentication attempts by ~40%
- Built an admin panel for PANIIT managing 500+ user accounts, cutting admin response time from 2 days to under 4 hours
- Collaborated with senior engineers on 3 live projects, shipping React components and REST API integrations within the first month
- Boosted frontend rendering performance by refactoring React state management, reducing unnecessary re-renders by an estimated 35%

SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, C++
Frontend: React.js, Next.js
Backend: Node.js, Express.js, Spring Boot, RAG
Databases: MongoDB, PostgreSQL, Redis
DevOps & Tools: Docker, Kubernetes, Kafka, Git, AWS

PROJECTS

Kanvas — Cloud Development Environment Platform Live: <https://kanvas.advertises.co.in/>

- Built a self-hosted cloud IDE platform (similar to Replit/GitHub Codespaces) that provisions full browser-based VS Code environments on AWS EC2 in seconds using pre-warmed Auto Scaling Groups
- Engineered an Active-Heartbeat Lifecycling Engine that detects idle workspaces, auto-archives projects to AWS S3, and terminates EC2 instances — reducing cloud compute costs by up to 90%
- Integrated a context-aware AI coding assistant using Groq LLM with RAG (vector embeddings + cosine similarity) that generates and directly patches workspace file trees in real time
- Technologies:** React, TypeScript, Node.js, AWS EC2 · S3 · Auto Scaling, Redis, MongoDB, Docker, Kubernetes

CereBro — Intelligent Second Brain Live: <https://usecerebro.co.in/>

- Architected a Retrieval-Augmented Generation (RAG) search pipeline using Groq (Llama 3) and Pinecone Vector DB, enabling semantic queries and natural language conversations across a personal knowledge base
- Integrated the Xenova Transformers API for in-browser vector embeddings, enabling semantic search without server-side inference
- Built an automated URL scraping engine with Cheerio for rich metadata extraction, and secured auth via Google OAuth2 with Recoil for state management
- Technologies:** React, TypeScript, Node.js, MongoDB, Pinecone (Vector DB), Groq LLM (Llama 3), Cheerio, JWT

EDUCATION

B.Tech in Information Technology

Government Engineering College, Gandhinagar, Gujarat

2020 – 2024

CGPA: 8.21 / 10
